from 300 to 500 meters.\*\*

25X1

[ ] Comment:

- \* a. Report confirms that parachuting and cargo glider training was done at the field. The twin-engine aircraft, which are compared with a destroyer type, are described more accurately and designated as B-25s in a previous report (1). The routine dropping of medium-sized anti-tank guns and motor vehicles attached to several parachutes is reported for the first time.
- \*\* b. The cargo gliders towed by Douglas planes are believed to be C-119.
- c. From the flying and parachuting activity at the Klin airfield it is inferred that either an air landing training unit or a tactical technical testing point for air landing and parachute troops is stationed at the field. According to other reports, jet aircraft were only there temporarily.

1 Annex: Klin Airfield.
